On July 9, 1933, the California Department of Public Works broke ground on the San Francisco-Oakland Bay Bridge. Crowds gathered at Yerba Buena Island to celebrate the world's longest steel structure. The 1-day ceremony included performances by the Young Women of Bay Cities and the United States Navy Band; an airplane flight that linked Rincon Hill and Oakland with a symbolic bridge of smoke; and a simultaneous detonation of blasts at Yerba Buena Island, San Francisco and Oakland by then-President Franklin D. Roosevelt.

Nearly all cable bands and suspender ropes attached to cable

Progress continued throughout July on the Self-Anchored Suspension Span's (SAS) single main cable, as workers have connected 104 of the 114 cable bands and 160 of the 200 vertical suspender ropes. The suspender ropes will play an essential role during load transfer, when the weight of the bridge is transferred from the falsework that currently supports the free standing decks to the nearly 1-mile-long cable. Load transfer is scheduled to begin next month.

For more information on the SAS Main Cable, please visit BayBridgeInfo.org/projects/sas-main-cable

Construction to complete the Oakland Touchdown's eastbound deck started in late June, thanks to the successful implementation of detours near the Toll Plaza in May 2011 and February 2012. Those detours have moved traffic safely out of the path of construction, as the original westbound lanes were in the way of the new eastbound lanes. With drivers on the detours, work to complete the eastbound roadway is under way so the new East Span can open to all motorists during Labor Day weekend 2013.
